INVITATION TO BID

DESIGN AND CONSTRUCTION OF REFUSE DROP-OFF CENTERS-TURNKEY PROJECT (PHIPHIDI, TSHIVHILWI, MURAGA, MUKULA, & LWAMONDO)

Thulamela Local Municipality hereby invites suitably qualified, experienced and competent service providers to submit bids for the provision of the following services:

Bid Number	Project Description	Contact Persons	CIDB Grading	Non-Refundable Bid Price	Evaluation Criteria
29/2026 /2027	Design and construction of refuse drop-off centers-turnkey project (Phiphidi, Tshivhilwi, Muraga, Mukula, & Lwamondo)	Mr Madi M.S. (083 256 6647) Mrs. Muryai V. (015) 962 7609 Mr TP Mudzili (015) 962 7629	4GB or Higher	R4.00 per page or Bids can be downloaded from Thulamela website (www.thulamela.gov.za) for free	80/20 Preference points system and functionality

Tender documents are obtainable from Procurement Office, Office No. 02 at Thulamela Local Municipality Head Office, during the following times: 08:00 to 15:30 (Monday to Friday) as from 02 October 2026 to 20 October 2026 at a non-refundable bid price of R 4.00 per page, or can alternatively be downloaded from Thulamela website (www.thulamela.gov.za) for free. The tenderer(s) should also download SCM forms that are found in the Documents SCM-FORMS folder on the website and complete as part of the Bid documents.

The service providers must submit the completed Bid documents (in black ink) and hand deliver or courier them to Thulamela Municipality. All completed Bid documents (hand delivered or couriered) must be dropped in the BID BOX before the closing date and time of the Bids closure. The onus is on the service providers to make sure the Bid documents are submitted on time, and late submission won't be accepted.

Interested service providers (Consulting Engineers and Contractors) must attend a compulsory briefing session on 13 October 2026 at 11h00. Location: Thulamela local Municipality Head Office Council Chamber.

Interested Contractors and/or service providers will be expected to submit the Bid documents with the following compulsory requirements:

- Tax Compliance Status Letter or Tax Compliance Pin Number.
- Company registration documents (e.g., CK).
- Company profile.
- Valid proof of registration with CIDB
- Proof of valid Professional Indemnity Insurance
- Proof of registration on CSD
- Valid COIDA Letter of Good Standing
- In case of a joint venture (JV), a signed JV agreement must be submitted
- Curriculum vitae of the proposed project team
- Organogram of the project team indicating project key personnel
- Bidders must submit proof that municipal rates and taxes for both the company and its director(s) are not in arrears for more than three (3) months, and such proof must not be older than three (3) months from the closing date of advertisement. Where the business operates from leased premises, a valid lease agreement must be attached. Where a director does not own property or is renting, a valid lease agreement must also be provided. If the bidder resides or operates in an area where municipal services are not billed, an official signed and stamped letter from the relevant local municipality, not older than three (3) months from the closing date of advertisement, must be submitted confirming that the area is not subject to municipal billing and that the bidder is formally exempted from municipal service charges.
- List of similar projects completed by the contractor/service provider in the past 10 years with clients contact details, description and contract values. (Attach signed appointment letters, completion certificates and reference letters). NB: The municipality reserves the right to conduct verification with the referred clients of the similar completed projects.
- All records of any additional information posted should be submitted as compulsory requirements and it is the responsibility of the bidders to check with the respective project engineer or client representatives (contact details as provided above) if there are any additional information before submission of the tender documents.

Tenders should note the following: Functionality will be scored out of 100% and the minimum threshold to qualify is 70%. Tenderers who fail to meet the minimum threshold will not be considered for further evaluation.

	TARGETED GOALS	WEIGHT
Points for functionality	EXPERIENCE OF THE CONSTRUCTION COMPANY Demonstrate company experience / past performance in Roads and Stormwater construction projects.	30
	PLANT AND EQUIPMENT Proof of plant and equipment owned by the bidder. Details of major equipment owned (Please provide proof of ownership. Valid license disc and certificate of registration in the names of the bidder. Invoices or bank letters can serve as proof of ownership).	20
	EXPERIENCE OF KEY PERSONNEL Key staff- demonstrate qualifications and experience.	10
	EXPERIENCE OF THE CONSULTING ENGINEERING COMPANY The tenderer must demonstrate relevant experience in providing civil and/or structural engineering consulting services for building construction projects completed within the 10 years preceding the tender closing date.	30
	FINANCIAL STANDING Financial reference of the construction company.	10
	TOTAL:	100

Bids will be assessed under the provisions of the following Acts and its Regulations: Municipal Finance Management Act, (Act 56 of 2003); PPPFA, Supply Chain Management Policy of the municipality in accordance with the specifications and in terms of 80/20 preferential points system and functionality as per the advert and bid document

Specific Goals Categories (CSD will be used for verification)	Number of Points (80/20 system) 20 Points breakdown
1. 100% Black ownership	10
2. 100% Women ownership	5
3. Youth	3
4. Disability (Medical certificate will be used to verify the disability status of the bidder).	2

Sealed bid documents must be submitted in envelopes clearly indicating "BID NUMBER AND DESCRIPTION" on the outside and must reach the undersigned by depositing it into the official Bid Box at the front of the main entrance to Thohoyandou Civic Centre, Old Agriven Building, Thohoyandou, by no later than 11h00 on, 20 October 2026.

The Municipality is not bound to accept the lowest Bid and reserves the right to accept any part of a Bid. Bids must remain valid for a period of ninety (90) days after closing date of the submission thereof.

Bids may only be submitted on the bid documentation provided by the municipality.

NB: Bids which are late, incomplete, unsigned, completed by pencil, sent by telegraph, facsimile, electronically (Fax), or E-mail and without the compulsory requirements will be disqualified

MUNICIPAL MANAGER

DATE

1. EVALUATION CRITERIA

COMBINED TECHNICAL SCORE

The technical score will be calculated as follows:

TARGETED GOALS:		WEIGHT
Points for functionality	EXPERIENCE OF THE CONSTRUCTION COMPANY — MAXIMUM 30 POINTS The tenderer must demonstrate experience in successfully completing similar building or built-environment construction projects within the 10 years preceding the tender closing date. The completion date stated on the completion certificate will be used to determine eligibility. Each qualifying project must have had a final construction value exceeding R3,000,000, inclusive of VAT, with no maximum value limit (R3 000 000 or higher). This includes projects falling within the CIDB Grade 4GB tender-value range and all higher CIDB grading ranges (4GB or higher). The tenderer must clearly describe how each submitted project is similar in nature, scope and complexity to the project being tendered for. The employer's name and contactable reference details must also be provided. Scoring: • Six points will be awarded for each qualifying completed project. • A maximum of five projects will be considered. • Maximum available points: 30 points. For each project submitted, the tenderer must attach: 1. A signed appointment letter or contract indicating the project description and contract value; and 2. The corresponding signed completion certificate confirming successful completion of the project. Important: No points will be awarded for a project if either the signed appointment letter or the corresponding signed completion certificate is not submitted. Projects falling outside the prescribed value range, completed more than 10 years before the tender closing date, or not sufficiently similar to the required scope will not be considered.	30

TENDERER'S OWN PLANT AND EQUIPMENT

The tenderer must provide a detailed schedule of the major plant, vehicles and equipment owned and proposed for use on the project. The schedule must include the description, make, model, registration number or serial number, quantity and current condition of each item.

Acceptable proof of ownership includes:

- A vehicle registration certificate reflecting the tenderer as the registered titleholder or owner;
- A valid vehicle licence disc, where applicable;
- An original or certified copy of the purchase invoice reflecting the tenderer's name and the equipment details; or
- A letter from the financing institution confirming that the plant, vehicle or equipment is financed in the tenderer's name.

For vehicles and other registerable plant, the tenderer must submit both the registration certificate and a valid licence disc. A licence disc alone will not be accepted as conclusive proof of ownership.

For non-registerable plant and equipment, the purchase invoice must clearly identify the tenderer and provide sufficient information to identify the relevant item, including its description, model or serial number where applicable.

Plant and equipment hired, leased or borrowed must not be presented as tenderer-owned equipment and will not be evaluated as tenderer(s) plant and equipment.

Equipment	Number	Weight
Bakkie/Pick-up Vehicle (Minimum payload capacity of 1 tonne).	1	Weight: 5
Half Truck (Minimum payload capacity of 2 tonnes).	1	Weight: 5
Concrete Mixer (Minimum mixing	1	Weight: 2.5

20

	capacity of 350 litres or higher).			
	Concrete Vibrator (Poker size ranging from 45 mm to 60 mm).	1	Weight: 2.5	
	Excavator/TLB (Minimum operating weight or capacity of 6 tonnes and above).	1	Weight: 5	
	EXPERIENCE AND QUALIFICATIONS OF KEY PERSONNEL The tenderer must propose suitably qualified and experienced key personnel for the execution of the project. Points will be allocated only where the required qualifications, professional registration certificates and detailed curriculum vitae are submitted. 1. Project Engineer — Maximum 10 Points (a) Professional registration — 5 points The proposed Project Engineer must be professionally registered with the Engineering Council of South Africa (ECSA) in one of the following categories: • Professional Engineer (Pr Eng); or • Professional Engineering Technologist (Pr Tech Eng). A valid ECSA registration certificate or current proof of registration must be attached. • Complies with the requirement: 5 points • Does not comply, or proof not submitted: 0 points (b) Relevant post-registration experience — 5 points Relevant experience must be calculated from the effective date of professional registration with ECSA and must relate to civil and/or structural engineering services for building construction projects. • Five years or more of relevant post-registration experience: 5 points			20

	• Less than five years of relevant post-registration experience: 0 points A detailed and signed curriculum vitae indicating project names, responsibilities, project values, clients and project durations must be attached. 2. General Foreman — Maximum 5 Points (a) Academic qualification — 3 points The proposed General Foreman must possess a National Diploma in Building, Construction Management, Civil Engineering or an equivalent relevant qualification. • Complies with the requirement: 3 points • Does not comply, or certified proof of qualification not submitted: 0 points (b) Relevant experience — 2 points The proposed General Foreman must have relevant experience as a General Foreman on building construction projects. • Five years or more of relevant experience: 2 points • Less than five years of relevant experience: 0 points A detailed and signed curriculum vitae indicating the relevant projects, positions held, responsibilities and employment periods must be attached. 3. Construction Health and Safety Officer — Maximum 5 Points (a) Professional registration — 3 points The proposed Construction Health and Safety Officer must be registered with the South African Council for the Project and Construction Management Professions (SACPCMP) as a Construction Health and Safety Officer (CHSO). A valid SACPCMP registration certificate or current proof of registration must be attached. • Complies with the requirement: 3 points • Does not comply, or proof not submitted: 0 points (b) Relevant post-registration experience — 2 points Relevant experience must be calculated from the effective date of registration with SACPCMP.	
--	---	--

	• Three years or more of relevant post-registration experience: 2 points • Less than three years of relevant post-registration experience: 0 points A detailed and signed curriculum vitae indicating the relevant projects, responsibilities and project durations must be attached. TOTAL AVAILABLE POINTS: 20 POINTS Important notes: 1. No points will be awarded where the required supporting documentation is not submitted. 2. All professional registrations must be valid and certified as at the tender closing date. 3. Experience must be clearly supported by the information contained in the submitted curriculum vitae (please indicate project(s) duration). 4. The Municipality reserves the right to verify qualifications, registrations, experience and references. 5. Where the same individual is proposed for more than one key position, the tenderer must demonstrate that this arrangement is legally permissible and practically achievable without compromising project delivery.	
	EXPERIENCE OF THE CONSULTING ENGINEERING COMPANY The tenderer must demonstrate relevant experience in providing civil and/or structural engineering consulting services for building construction projects completed within the 10 years preceding the tender closing date. The tenderer must submit the following documents for each project claimed: • A signed appointment letter or contract confirming the tenderer's appointment; • A signed reference letter from the client confirming satisfactory performance. Each qualifying project must have had a minimum building construction value exceeding R3 million, inclusive of VAT.	20

	The stated value refers to the building construction contract value and not the consulting engineer’s professional fee. Scoring: • 5 points will be awarded for each qualifying completed project. • A maximum of four projects will be considered. • Maximum available points: 20 points. Important: No points will be awarded for a project if any of the required supporting documents listed above is not submitted. Projects that do not meet the minimum construction value or that were completed more than 10 years before the tender closing date will not be considered.

THULAMELA LOCAL MUNICIPALITY

Terms of Reference DESIGN AND CONSTRUCTION OF FIVE REFUSE DROP OFF CENTRES ON A TURNKEY BASIS

Project locations

Phiphidi

Tshivhilwi

Muraga

Mukula

Lwamondo

Minimum CIDB grading: 4GB or higher

1 Purpose of the Terms of Reference

Thulamela Local Municipality invites suitably qualified, experienced and capable service providers with appropriate construction and engineering design expertise to undertake the turnkey design and construction of five community refuse drop-off centres. The appointed service provider shall accept single-point responsibility for all investigations, designs, statutory submissions, construction, commissioning, handover and correction of defects necessary to deliver safe, durable and fully functional facilities.

These Terms of Reference define the Municipality's minimum employer requirements. The service provider remains responsible for developing a complete, coordinated and fit-for-purpose solution after confirming the site conditions and operational requirements. Any dimensions or details shown in a reference photograph are indicative only and shall not replace professional design, site verification or statutory approval.

2 Project Background

The Municipality requires controlled community facilities where residents can deposit permitted household refuse and recyclable materials. Municipal refuse-collection vehicles will remove accumulated waste at planned intervals. The facilities must improve cleanliness, discourage illegal dumping, support separation at source and allow safe public use and efficient municipal collection.

Each centre is envisaged principally as a roofed, fenced structure with waste-separation bays, a durable hardstanding, controlled access and associated drainage and signage. The design shall respond to the particular conditions at each site while maintaining a consistent municipal standard across all five locations.

3 Project Locations

No.	Locality	Site confirmation requirement
1	Phiphidi	Exact parcel (site location), boundaries, access and services to be confirmed at inception
2	Tshivhilwi	Exact parcel (site location), boundaries, access and services to be confirmed at inception
3	Muraga	Exact parcel (site location), boundaries, access and services to be confirmed at inception
4	Mukula	Exact parcel (site location), boundaries, access and services to be confirmed at inception
5	Lwamondo	Exact parcel (site location), boundaries, access and services to be confirmed at inception

The Municipality will identify and make the intended sites available for investigation. The contractor shall verify land availability, cadastral position, servitudes, road reserve

implications, access, levels, existing services and all physical constraints before finalising any design.

4 Project Objectives

Design and construct five safe, accessible, robust and low-maintenance community refuse drop-off centres.

Provide controlled facilities that limit litter, windblown waste, nuisance, pollution and illegal dumping.

Enable practical separation of permitted waste streams and recovery of recyclable material. Provide safe access and circulation for pedestrians, light vehicles and municipal refuse-collection vehicles.

Deliver site-specific solutions that comply with applicable legislation, approvals, technical standards and municipal by-laws.

Provide the Municipality with complete approvals, certificates, as-built information, operating guidance and warranties.

5 Contracting and Turnkey Responsibility

The appointment shall be on a turnkey design-and-construction basis. The successful bidder shall be responsible for the completeness, coordination, buildability, structural adequacy, statutory compliance and performance of the works, including work performed by its designers, specialists, subcontractors and suppliers.

The contractor shall not rely solely on the Municipality's indicative information or reference photograph. It shall conduct all investigations reasonably required to establish the design basis and shall promptly notify the Municipality of material site constraints, approval risks or scope conflicts. Review or acceptance by the Municipality shall not relieve the contractor or its registered professionals of design responsibility.

6 Overall Scope of Services

6.1 Inception and site verification

Attend an inception meeting and confirm the reporting, communication, approval and document-control procedures.

Inspect each site jointly with the Municipality and record existing conditions photographically. Confirm boundaries, ownership or lawful municipal control, servitudes, road reserves, access rights, neighbouring uses and visible encroachments.

Undertake topographical, cadastral and engineering surveys where necessary for accurate design and setting out.

Locate visible and known underground and overhead services and obtain information from the relevant service authorities.

Assess terrain, drainage paths, flood and erosion risks, traffic interaction, public safety, security and municipal collection operations.

Undertake appropriate geotechnical or founding investigations where required by the structural designer.

Prepare a site verification and constraints report for each locality before concept approval.

6.2 Environmental and statutory screening

Screen each site and the proposed activity against applicable environmental, waste, water, land-use, heritage and other regulatory requirements.

Determine whether environmental authorisation, waste-management licensing or registration, water-use authorisation, heritage approval, wayleave, land-use approval or any other permission is triggered.

Prepare and submit the applications and supporting information included in the accepted tender, and manage the approval process in coordination with the Municipality.

Identify sensitive receptors, watercourses, wetlands, drainage lines, protected vegetation, erosion hazards and pollution pathways.

Prepare a project- and site-specific environmental management plan or method statement appropriate to the screening findings.

No construction shall begin at an affected site until the approvals legally required for that work are in place.

6.3 Concept design

Confirm the intended waste streams, anticipated use, collection method, collection-vehicle type and operational capacity with the Municipality.

Develop a consistent prototype concept capable of site-specific adaptation.

Prepare site layouts, plans, elevations, sections, three-dimensional views where useful, an outline specification and preliminary cost allocation for each centre.

Demonstrate pedestrian and vehicle access, collection manoeuvring, sight distance, drainage, security, waste bays, signage and maintenance access.

Present the concept designs to the Municipality and incorporate written comments before detailed design.

6.4 Detailed design and documentation

Prepare coordinated architectural, civil and structural designs and any necessary electrical, fire or specialist designs.

Provide design calculations, design criteria, risk assessments and professional design certifications.

Prepare construction drawings, schedules, specifications, setting-out information and a detailed priced activity schedule or bill of quantities.

Prepare and submit building plans and other statutory drawings where required.

Prepare a construction programme, procurement schedule, inspection and test plan, quality plan, environmental plan and health-and-safety documentation.

Obtain the Municipality's written approval of the detailed design before commencing permanent construction.

6.5 Construction

Establish and secure each site; provide temporary services, access control, notices and protection of the public.

Clear and grub only the approved footprint, remove unsuitable material and dispose of waste legally.

Set out the works and protect survey controls and existing services.

Execute earthworks, foundations, reinforced concrete, structural framing, roofing, fencing, gates, bays, paving or hardstanding, drainage, signage and associated work.

Protect existing roads, services and adjoining property; repair contractor-caused damage at no additional cost.

Maintain safe community access around the works and control dust, noise, mud, litter, erosion and contaminated runoff.

Undertake all inspections and tests and rectify non-conforming work.

Complete, clean, commission and hand over each facility ready for safe use.

7 Minimum Functional and Technical Requirements

7.1 General performance requirements

The final size and arrangement shall be justified by the bidder's professional team using the available footprint, expected demand, collection frequency and municipal vehicle requirements. Each centre shall, as a minimum, include the elements below.

Element	Minimum requirement
Site platform and access	Stable, all-weather and safely graded platform; safe entry and exit; adequate sight lines; pedestrian access separated from vehicle conflict where reasonably practicable; geometry compatible with the nominated municipal collection vehicle.
Floor and hardstanding	Reinforced concrete slab or professionally justified equivalent designed for imposed loads, waste containers, cleaning and municipal operations. Surface shall be hard-wearing, non-slip, washable, crack-controlled and graded to prevent ponding.
Roofed structure	Durable roof over the waste-deposit area, supported by a professionally designed structural system. Clear height, column positions and overhangs shall allow safe use and collection without vehicle impact.
Waste separation bays	Clearly separated, robust and washable bays or container positions for the waste streams approved by the Municipality. Layout shall prevent cross-contamination and permit safe removal.
Fencing and gates	Secure, corrosion-protected perimeter fencing of a suitable anti-climb type and height, with robust posts, foundations and lockable vehicle and pedestrian access as required by the approved layout.
Drainage	Positive surface drainage; diversion of clean stormwater; control of contaminated wash water or leachate where reasonably foreseeable; erosion protection; no uncontrolled discharge to roads, properties or water resources.
Signage	Permanent municipal identification, opening or access rules, accepted and prohibited waste, separation instructions, safety warnings, emergency contact details and prohibition of burning and illegal dumping.

Element	Minimum requirement
Security and safety	Good visibility, no entrapment points or sharp edges, defensible layout, protective barriers or bollards at vulnerable structural elements, and provision for lockable control after hours.
Ancillary works	Kerbing, ramps, aprons, wheel stops, barriers, litter screens, retaining works, landscaping rehabilitation and road-edge tie-ins necessary for a complete facility.

7.2 Structural design and stability

The structural system, foundations, slab, fencing, gates and connections shall be designed and certified by an appropriately ECSA-registered structural or civil engineering professional.

Design shall account for dead, imposed, wind, impact and other applicable actions; the designer shall determine site wind exposure and all applicable load combinations.

Roof sheeting, purlins, frames, bracing, holding-down bolts, base plates and foundations shall form a continuous, durable load path and resist uplift, sway and progressive instability.

Vehicle-impact risk shall be addressed through layout, kerbs, wheel stops, bollards or barriers where required.

Soil conditions, founding level, bearing capacity, settlement, erosion and expansive or collapsible soils shall be considered.

All exposed steelwork, fasteners and connections shall receive a corrosion-protection system suited to the environment and stated maintenance life.

Shop drawings and fabrication details shall be reviewed and accepted by the responsible registered professional before manufacture.

7.3 Materials and workmanship

Materials shall be new, fit for purpose and supported by manufacturer data, compliance certificates and warranties where applicable.

Concrete strength, reinforcement, cover, joints, curing and surface finish shall be specified by the designer and verified through an approved inspection and testing regime.

Masonry, structural steel, roof covering, fencing, gates, coatings, fasteners and signage shall comply with the approved drawings and applicable SANS requirements.

Hot-dip galvanising, protective coatings and dissimilar-metal detailing shall be appropriate for long-term external exposure.

Dimensions, finishes and products shall be standardised across the five sites where practicable to simplify maintenance and replacement.

7.4 Waste acceptance and operational safeguards

The design shall cater only for waste streams formally approved by the Municipality.

Unless expressly approved and lawfully provided for, the centres shall not accept hazardous waste, healthcare risk waste, asbestos, chemicals, liquid waste, sewage, hot ash, explosives, dead animals or other prohibited waste.

Open burning, burying, scavenging and uncontrolled sorting shall be prohibited through signage and operating controls.

Waste shall be stored for the shortest practicable period and removed according to a municipal collection plan before overflow or nuisance occurs.

The design shall facilitate cleaning, litter control, pest control, inspection and safe collection.

8 Professional Team Requirements

The bidder shall provide a multidisciplinary team adequate for the full turnkey scope. Registration shall be current for the duration of the relevant services. One person may fulfil more than one role only where suitably qualified, registered and able to discharge both responsibilities without compromising the project.

Tenderers shall submit certified or verifiable proof of qualifications and professional registration, concise curricula vitae, availability commitments and an organogram. Substitution after award requires prior written approval and a replacement of equal or better competence.

9 Legislative and Standards Compliance

The contractor shall comply with all legislation, regulations, standards, permits and by-laws applicable at the time of execution, including amendments. The following list is not exhaustive:

Constitution of the Republic of South Africa, 1996, insofar as applicable to environmental and municipal service obligations.

Municipal Finance Management Act 56 of 2003 and applicable municipal supply-chain-management requirements.

Construction Industry Development Board Act 38 of 2000 and applicable CIDB Regulations and standards.

National Environmental Management Act 107 of 1998 and applicable Environmental Impact Assessment Listing Notices.

National Environmental Management: Waste Act 59 of 2008, applicable waste regulations, national norms and standards and the National Waste Management Strategy.

National Water Act 36 of 1998.

National Heritage Resources Act 25 of 1999.

Spatial Planning and Land Use Management Act 16 of 2013 and applicable land-use controls.

National Building Regulations and Building Standards Act 103 of 1977 and applicable National Building Regulations and SANS 10400 requirements.

Occupational Health and Safety Act 85 of 1993 and applicable regulations, including the Construction Regulations currently in force.

Compensation for Occupational Injuries and Diseases Act 130 of 1993.

Preferential Procurement Policy Framework Act 5 of 2000 and regulations applicable to the procurement at the time of advertisement.

Applicable Thulamela Local Municipality by-laws, policies, approval procedures and standard requirements.

Applicable SANS, COTO, COLTO or other recognised technical standards expressly incorporated into the contract documents.

Where a listed instrument has been repealed or replaced before advertisement or execution, the current replacement shall apply. The tender document shall be checked by SCM and the responsible departments immediately before publication.

10 Environmental Management Requirements

10.1 Design stage

Avoid environmentally sensitive land and minimise the disturbed footprint.

Separate clean stormwater from areas that may contain waste residue.

Provide containment and drainage appropriate to the waste streams and cleaning method.

Prevent windblown litter using orientation, screens, containment and operational controls.

Select durable, repairable and recyclable materials where practicable.

Provide for separation and recovery without creating unsafe manual-handling or public-access conditions.

10.2 Construction stage

Implement the approved environmental management plan and site-specific method statements.

Protect watercourses, drainage lines, vegetation, topsoil, existing services and adjoining properties.

Control dust, noise, erosion, sediment, concrete wash water, fuels, oils, chemicals and waste.

Provide bunded storage and spill-response materials; report and remediate incidents promptly.

Use licensed or otherwise lawful waste transporters and disposal or recovery facilities as applicable, and retain disposal records.

Rehabilitate all temporary works and disturbed areas, remove surplus materials and leave each site clean and stable.

10.3 Operational environmental documentation

Prepare a concise operating and maintenance manual covering permitted waste, inspection, cleaning, litter and pest control, collection frequency, drainage maintenance, incident response and record keeping.

Provide a site-specific environmental compliance file containing screening outcomes, approvals, monitoring records, incidents, waste records and close-out evidence.

11 Occupational Health and Safety

The Municipality and appointed contractor shall discharge their respective duties under the Occupational Health and Safety Act and Construction Regulations. The contractor shall price and provide all resources needed for legal compliance and shall not treat health and safety as a provisional or optional obligation.

Submit a project-specific construction health-and-safety plan responding to the Municipality's baseline health-and-safety specification.

Provide valid proof of good standing under COIDA before site handover and maintain it for the contract period.

Make all required statutory notifications or permit applications and do not commence affected work before authorisation.

Appoint competent persons in writing and maintain the required health-and-safety file.

Address public interface, traffic and pedestrian management, excavation, temporary works, lifting, work at height, structural steel erection, roofing, electrical tools, hot work, housekeeping and emergency response.

Fence and secure active work areas and prevent unauthorised community access.

Report incidents and non-conformances, implement corrective action and submit monthly health-and-safety reports.

Provide a complete consolidated health-and-safety file at handover.

12 Quality Management and Testing

Submit a project quality plan and inspection and test plan before construction.

Use hold points for founding conditions, reinforcement, concrete placement, structural connections, roof and bracing, drainage falls, coatings and practical completion.

Provide material approvals, batch tickets, concrete test results, compaction results where applicable, weld and bolt inspection records, coating or galvanising certificates and product warranties.

Give the Municipality reasonable notice to inspect work before it is covered.

Maintain site diaries, photographic records, requests for information, design changes, site instructions, test records and non-conformance registers.

The responsible, registered professionals shall inspect the work at appropriate stages and certify conformity with their designs at completion.

Defective or non-conforming work shall be removed, repaired, retested or replaced at the contractor's cost.

13 Deliverables and Approval Gates

Stage	Minimum deliverables	Approval gate
1.Inception	Inception report; confirmed scope; responsibility matrix; master programme; stakeholder and approvals plan; initial risk register.	Municipal acceptance before detailed investigations proceed.
2.Site verification	Site assessment and photographic reports; surveys; service information; constraints register; geotechnical findings where required.	Acceptance of verified design basis.
3.Concept design	Site-specific layouts; plans, elevations and sections; vehicle and pedestrian circulation; design narrative; environmental screening; preliminary cost allocation.	Written concept approval for each site.

Stage	Minimum deliverables	Approval gate
4.Detailed design	Signed drawings; calculations; specifications; professional certifications; final pricing breakdown; approval submissions; updated programme and risk register.	Municipal and statutory approval before permanent works.
5.Construction	Approved method statements; quality and safety files; progress reports; test results; inspection records; environmental records; updated drawings.	Hold-point releases and monthly progress acceptance.
6.Practical completion	Complete facilities; defect lists; test and commissioning records; professional completion certificates; statutory certificates available at that stage.	Practical completion inspection and certificate.
7 Handover and close-out	As-built drawings in PDF and editable native formats; asset register; coordinates; warranties; manuals; keys; training; final safety and environmental files; approved building documentation where applicable.	Final handover and close-out acceptance.
8 Defects close-out	Correction of all notified defects and final inspection records.	Final completion under the contract conditions.

14 Programme and Reporting

Tenderers shall propose a realistic overall completion period and a site-by-site programme. The programme shall show design investigations, approvals, long-lead procurement, construction sequencing, inspections, practical completion and close-out. Parallel delivery may be proposed provided that adequate professional, supervisory, plant and financial resources are demonstrated.

Submit a detailed baseline programme within the period stated in the contract after appointment.

Submit weekly site updates and formal monthly reports showing progress against programme, expenditure, cash flow, resources, procurement, design status, approvals, risks, safety, environment, quality, community matters, photographs and recovery actions.

Attend inception, design-review, site, progress and close-out meetings as directed.

Notify the Municipality promptly of any event that may affect cost, time, quality, statutory compliance or safe operation.

15 Stakeholder and Community Liaison

Coordinate all formal community engagement through the Municipality and its authorised representatives.

Cooperate with ward councillors, traditional leadership, municipal waste personnel and affected road or service authorities as directed.

Provide notices and safety information in appropriate languages where required.

Maintain a complaints and incidents register and refer commitments affecting scope, time or cost to the Municipality for written instruction.

Comply with any approved requirements concerning a Community Liaison Officer and local labour without making unauthorised employment commitments.

16 Municipal Responsibilities

Identify the intended sites and provide available municipal records and operational information.

Provide access to municipal stakeholders and nominate an authorised project representative.

Review submissions within agreed periods and issue decisions or consolidated comments.

Provide the client's baseline health-and-safety specification and make any appointments required of the client by law.

Facilitate municipal approvals without guaranteeing approval by independent authorities.

Inspect, monitor and administer the contract in accordance with the contract documents.

17 Pricing and Financial Requirements

The tender shall be priced as a complete turnkey obligation. The bidder shall provide a transparent breakdown per site and per project stage. Unless expressly excluded in the pricing schedule, the tendered amount shall include all professional fees, surveys, investigations, design, statutory submissions, travel, community-interface costs, temporary works, plant, materials, labour, supervision, testing, health and safety, environmental controls, commissioning, as-built documentation, warranties, overheads, profit, contingencies under the bidder's control and applicable taxes.

The pricing schedule should separately identify provisional sums only for clearly defined work that cannot reasonably be quantified before investigation. A provisional sum shall not be used to transfer normal turnkey design-completion risk back to the Municipality. No additional payment shall arise from omissions that a competent turnkey bidder should reasonably have allowed for.

18 Minimum CIDB Requirement

Based on the current estimated contract value and the predominantly roofed, fenced building-type scope, the recommended minimum designation is:

CIDB 4GB OR HIGHER

Recommended tender wording: It is estimated that tenderers must have a CIDB contractor grading designation of 4GB or higher. The bidder's registration shall be active and capable of verification on the CIDB Register of Contractors. The grading required at award shall be appropriate to the final tendered contract value and applicable CIDB rules.

19 Tender Returnable Technical Information

Completed and signed tender schedules and all mandatory returnables.

Verifiable CIDB registration details.

Turnkey execution methodology addressing all five sites.
 Preliminary concept approach and design assumptions, without undertaking unpaid detailed design.
 Detailed programme, resource schedule and cash-flow forecast.
 Company experience schedule supported by appointment letters, completion certificates and client reference letters for each project claimed.
 Professional team schedule, organogram, qualifications, registrations, curricula vitae and letters of availability.
 Schedule of proposed subcontractors and the work allocated to each.
 Construction plant and equipment schedule showing ownership, and availability arrangements.
 Preliminary project risk register addressing approvals, land, access, services, ground conditions, weather, community interface, safety, programme and cost.
 Preliminary quality, environmental and health-and-safety approaches.
 Detailed turnkey price breakdown per centre and per stage.

20 Insurances, Security and Warranties

Provide the insurance and contract security required by the chosen conditions of contract, including contract works, public liability, motor, workers' compensation and professional indemnity appropriate to the design responsibility.
 Maintain professional indemnity cover for the period and amount stated in the tender data.
 Provide manufacturer and installer warranties for roofing, coatings, gates, fencing and other warranted components.
 The defects-liability or defects-notification period should be not less than 6 months from practical completion of the relevant works, unless the approved contract data provides a longer period.
 Warranties shall be issued or ceded to the Municipality at handover where applicable.

21 Handover, Training and Defects

Conduct joint practical-completion inspections at each site and issue consolidated defect lists.
 Demonstrate access control, gates, drainage, cleaning arrangements, waste-bay use and safe municipal collection procedures.
 Train nominated municipal personnel in routine inspection, cleaning, minor maintenance, incident response and record keeping.
 Provide labelled keys, locks, spare items, warranties, manuals, approved drawings and as-built records.
 Correct defects within the periods instructed and attend a final-completion inspection.
 The Municipality may withhold completion certification until all safety-critical, statutory and operational deliverables are complete.

22 Design Review and Change Control

All submissions shall be issued through a controlled document register with revision numbers, dates, status and professional signatures.
 The contractor shall resolve interdisciplinary clashes before submission.

Municipal comments shall be tracked in a response register and closed out in the next revision.

No material change to approved scope, layout, structure, materials or cost shall be implemented without written instruction or approval under the contract.

Contractor-initiated design corrections required for compliance, safety, completeness or buildability shall not automatically constitute a compensation event or variation.

23 Key Project Risks to Be Managed

Risk	Minimum required response
Land or boundary uncertainty	Verify ownership, cadastral boundaries, servitudes and lawful access before detailed design.
Unrecorded services	Obtain records, scan or expose safely where necessary, and coordinate relocation or protection.
Environmental or waste approval trigger	Complete screening early; programme submissions and do not commence unlawfully.
Inadequate operational capacity	Confirm waste streams, collection frequency, container arrangement and vehicle operations with the user department.
Wind uplift or structural instability	Provide site-appropriate professional design, bracing, anchorage, connection details, inspections and certification.
Vehicle impact	Separate movements and protect vulnerable columns, fences and gates.
Polluted runoff or litter escape	Grade and contain appropriate surfaces; separate clean water; provide screens and an operating plan.
Community interface and vandalism	Use robust detailing, controlled liaison, secure fencing, visibility and replaceable components.
Budget pressure across five sites	Standardise the prototype, provide site cost allocations, maintain cost control and obtain approval before scope changes.

24 Reference Information and Order of Precedence

Any photograph supplied by the Municipality illustrates the desired scale and general function only. It is not a construction drawing, design approval, specification or representation that the pictured facility complies with South African requirements. The successful bidder shall develop and certify its own site-specific designs.

The order of precedence between these Terms of Reference, tender data, pricing schedules, conditions of contract, specifications, drawings and addenda shall be stated in the final contract. Tenderers shall raise discrepancies before the clarification deadline.

25 Completion Standard

The project will be considered complete only when all five centres are safe, functional, legally compliant, professionally certified, free of material defects, clean and ready for municipal operation; all required approvals and close-out records have been delivered; and the Municipality has accepted the works in accordance with the contract.

The following is a statement of similar work executed by the company/ies in the last ten (10) years:

Employer, Contact person and telephone number	Description of contract	Value of work inclusive of VAT (Rand) if applicable	Date Completed
